Factors for Improving Think Tank Performance	68

Introduction and Objectives

In 2009/10 and 2013, GlobeScan, a global stakeholder research consultancy, was commissioned by the Think Tank Initiative (TTI) to conduct a survey of policy stakeholders in three regions: Africa, Latin America, and South Asia.

In 2018, the TTI once again engaged GlobeScan to carry out the Think Tank Initiative Policy Community Survey in the same three regions.

Through the Policy Community Survey, the Think Tank Initiative aims to:

- Develop an understanding of the policy community in specific countries
- Understand the strengths and weaknesses of particular think tanks, as perceived by a subset of the policy community
- Understand what activities are associated with the success of think tanks in order to help prioritize support strategies such as funding, training, and technical assistance
- Benchmark and track broad changes in the policy community and perceptions of think tanks in selected countries

This report presents the results of the African survey.

A global report will be prepared which presents an overview of the findings of the studies undertaken in all regions once they are completed.

Executive Summary

Executive Summary

Information needs of policy community unchanged, but easier to satisfy

This third wave of the policy community survey shows that over the past eight years, information needs of policy makers are fairly consistent, with economic/fiscal issues and information related to education and agriculture/food security remaining at the forefront. However, what appears to have changed is that policy stakeholders are more selective now in their information needs, suggesting perhaps a more focused approach in their work. Moreover, the perceived ease of obtaining information to support policy development has continued on a generally upward trend for most issues, particularly gender issues and on poverty alleviation. This is encouraging, as the issues for which stakeholders desire the most information to support policy development also tend to be relatively easier to obtain. Furthermore, new questioning around the Sustainable Development Goals (SDGs) this year shows that their dissemination has been successful in the region, as stakeholders consider information on the SDGs easiest to obtain relative to all other issues.

Websites and reports/publications continue to be top format/source of policy information, but social media of burgeoning interest

Websites, email, and print remain the most useful formats for stakeholders to receive information for national policy development, although interest in social media as a format has increased since 2013.

Overall, stakeholders rely on a fairly balanced mix of sources when seeking information to increase their understanding of policy development. Publications/reports, conferences/events, and discussion with colleagues/peers are the most commonly reported sources, similar to 2013. However, there has been a notable decrease in the usage of databases / statistical data banks, particularly in Uganda and Ghana.

Government organizations continue to dominate as a top source of information on social and economic policies, due to greatest alignment with stakeholders' research needs

When it comes to seeking out organizations to acquire information on social and economic policies, stakeholders generally rely on government ministries and government-owned research institutes. This is due to the close alignment with their research needs and is done despite the fact that the perceived quality of these institutions is relatively lower than for most other institutions tested, including national think tanks. The importance of alignment is further reinforced by the fact that international university-based research institutes enjoy the highest ratings of quality of research, but the lowest ratings of relevance of research to needs and thus are among the least-used organizations. It appears that relevance, rather than quality, is the main driver of usage.

Executive Summary

National think tanks maintain fairly strong ratings of quality, but have room to improve perceptions among government stakeholders

Overall, the quality of research provided by national think tanks is seen as fairly strong and consistent with previous waves. Those in research/academia and from NGOs and media continue to rate national think tanks most highly in terms of quality; however, elected government officials who are most directly involved in policy development rate the quality of national think tanks relatively lower than most stakeholder groups. For the minority of stakeholders who say they do not turn to think tanks, the main reason given is limited familiarity, which is cited considerably more often than in previous waves of this study. Raising awareness should be a key priority.

Across the region, national think tanks tested are generally seen as performing well with regards to having knowledge of the policy-making process, having quality research and researchers, as well as solid regional knowledge. Areas for improvement are fairly consistent across the region, with gender empowerment/equality research, having adequate infrastructure to function effectively, and partnering with non-government policy actors topping the list.

Implications

On the whole, perceptions of national think tanks in Africa are generally positive, although there is room for improvement:

- As the continent has become more connected over the years, national think tanks have more of an opportunity to increase familiarity and showcase their work to a wider audience, particularly on social media where stakeholders (particularly elected government officials) are increasingly spending their time.
- Other opportunities for national think tanks include working toward bridging the information gap on agriculture/food security, a topic where many stakeholders consider it relatively more difficult to obtain sufficient information.
- Focusing energy on gender empowerment/equality research could also be an opportunity for some national think tanks, as it is an area where nearly all national think tanks are lacking, but also where demand is fairly strong.

Making such research as relevant as possible and easy to access and understand will likely bolster the use of these types of national think tanks and hopefully encourage national governments or other entities to invest more in them, as many national think tanks continue to struggle with having enough infrastructure to function effectively – a condition which may become more acute once

the Think Tank Initiative wraps up in 2019.

Methodology and Sample Composition

Methodology

The survey of policy stakeholders was conducted through online, telephone, and face-to-face interviews in 8 African countries from September 26th 2017 to February 12th 2018.

The participating African countries are Ethiopia, Ghana, Kenya, Nigeria, Rwanda, Senegal, Tanzania, and Uganda.

The survey was offered in English and French.

		Africa							
	Total	Ethiopia	Ghana	Kenya	Nigeria	Rwanda	Senegal	Tanzania	Uganda
Total	344	45	42	42	43	39	45	45	43
Online	125	37	3	3	10	29	28	10	5
Offline	219	8	39	39	33	10	17	35	38
Telephone	162	8	30	31	4	3	16	35	35
Face-to-face	57	0	9	8	29	7	1	0	3

Methodology: Respondent Description

Respondents are from the following sectors:

- ***Government:** Senior officials (both elected and non-elected) who are directly involved in or influence policy making.
- **Non-governmental organization:** Senior staff (local or international) whose mission is related to economic development, environmental issues, and/or poverty alleviation.
- **Media:** Editors or journalists who report on public policy, finance, economics, international affairs, and/or development, who are knowledgeable about national policy issues.
- **Multilateral/bilateral organization:** Senior staff from organizations run by foreign governments either individually (bilateral such as DFID, USAID) or as a group (multilateral such as UN agencies, World Bank).
- **Private sector:** Senior staff working at large well-known national and multinational companies.
- **Research/academia:** Senior staff at universities, colleges, research institutes, and/or think tanks.

Stakeholders surveyed are senior-level staff in their organizations and active members of the national policy community, meaning that they develop or influence national government policy. Efforts were made to ensure that no two stakeholders were interviewed from the same organization. For government stakeholders only up to two respondents could be from the same ministry, but must be from separate departments.

Stakeholder sample lists were provided by the International Development Research Centre (IDRC), a donor of the TTI, and TTI grantee organizations, and were supplemented by GlobeScan. GlobeScan stakeholder names were reviewed by the IDRC and grantee organizations. To minimize bias, interviews were conducted with a mixture of people – some sourced by grantee organizations and some sourced by GlobeScan.

Methodology: Sample Summary

Number of Stakeholders Interviewed by Country, 2018

		Africa							
	Total	Ethiopia	Ghana	Kenya	Nigeria	Rwanda	Senegal	Tanzania	Uganda
Total	344	45	42	42	43	39	45	45	43

Think Tanks Tested in Each Country and Number of Respondents Rating Each Think Tank

Africa, 2018

Country	Think tank	Sample size
Ethiopia	Ethiopian Economic Association/Ethiopian Economic Policy Research Institute (EEA/EEPRI), Ethiopian Development Research Institute (EDRI)	43, 41
Ghana	Institute of Economic Affairs (IEA), Institute of Statistical, Social and Economic Research (ISSER)	42, 42
Kenya	Institute of Economic Affairs (IEA), Kenya Institute for Public Policy Research and Analysis (KIPPRA)	39, 42
Nigeria	Centre for Population and Environmental Development (CPED), Center for the Study of the Economies of Africa (CSEA), AfriHeritage	20, 19, 11
Rwanda	Institute of Policy Analysis and Research (IPAR)	30
Senegal	Initiative prospective agricole et rurale (IPAR), Consortium pour la recherche économique et sociale (CRES)	30, 33
Tanzania	Economic and Social Research Foundation (ESRF), Research on Poverty Alleviation (REPOA), Science, Technology and Innovation Policy Research Organization (STIPRO) (formerly African Technology Policy Studies Network (ATPS) - Tanzania	17, 43, 35
Uganda	Advocates Coalition for Development and Environment (ACODE), Economic Policy Research Centre (EPRC), Makerere Institute of Social Research (MISR)	21, 40, 37

A Note on the Approach

Views are not representative of the whole policy community. The study was designed to gather views of *senior*-level policy actors within national policy communities on their research needs and their perceptions of think tanks' research quality and performance. The study was not intended to gather perceptions of a larger representative subset of the policy community which could generate statistically significant findings on demand for research. This approach was chosen consciously, recognizing the limitation it brings to the survey, but acknowledging the value of perceptions of individuals in senior positions within each national policy community who often are very difficult to reach.

These views provide the basis for reflection within the organizations supported by the TTI on how the organization's current performance is perceived by key stakeholders, and on ways in which the organization may enhance its organizational capacity to undertake policy-relevant research.

As was done for the African survey in 2009/10 and 2013, we set a target of 40 respondents per country with a balanced quota of responses across different stakeholder categories. For this wave, particular challenges were encountered in reaching elected government officials in Rwanda and non-elected government officials in Tanzania despite multiple attempts and the extension of fieldwork. To avoid delaying the project indefinitely we oversampled across other stakeholder groups to make up the difference for these two countries. As such, findings from Rwanda and Tanzania should be viewed with these considerations in mind.

A Note on Charts:

All figures reported in the charts are expressed in percentages, unless otherwise noted. Some percentages may not add up to 100% due to the rounding of individual response categories or due to the fact that respondents could give multiple answers to a particular question ("total mentions" is then reported).

Information Required for Policy Making in Africa: Type, Accessibility, Format

Information Required for Policy Making in Africa: Type, Accessibility, Format

Types of Information Required

Africa Level

- The types of information that members of the policy community desire have been fairly consistent over the past three waves of this study, with economic/fiscal issues, education, and agriculture/food security ranking highest and energy and foreign affairs lowest.
- Overall, when prompted, nearly three out of four respondents (74%) say that there is a demand for research relating to gender equality and women's empowerment.

Stakeholder Level

- Elected government officials and media representatives are mostly interested in economic/fiscal issues and agriculture/food security, while non-elected government officials and those in research/academia are primarily focused on information related to education.
- NGOs show the greatest interest in seeking information on gender issues and the Sustainable Development Goals (SDGs), while those in the private sector are most interested in trade/industry information.

Country Level

- At the country level, respondents generally prioritize information on economic/fiscal issues and education with regards to policy making. However, respondents from Senegal are far more likely to desire information on agriculture/food security than their counterparts in other countries. Similarly, respondents in Tanzania are more likely to seek information on trade/industry and those from Uganda are more interested in receiving information on gender issues.

Types of Information Required for Policy Making

Prompted, Multiple Responses Allowed, Africa, 2010–2018

Relative to previous years, stakeholders appear to be more focused in the types of information that they require (i.e., they don't select as wide a variety of topics as previous years). However, the trend of information required remains more or less the same.

* "Environment," "natural resources," and "energy" were combined in one response option in 2010 (selected by 50% of respondents), but were segmented in 2013.

** "Sustainable Development Goals" was added as a new metric in 2018

Demand in Your Country for Information on Gender Equality and Women's Empowerment

Percent of Stakeholders, by Stakeholder Type and Country, Africa, 2018

Is there a demand for gender equality and female empowerment research, and why?

Open-end Responses, Africa, 2018

Those who said that there was a demand for gender equality and female empowerment research in their country gave the following as reasons why:

- The need for better education amongst women and girls
- Demand for female empowerment/emancipation is relevant in all areas of life, but particularly in rural communities
- Can help to bring about equal rights and opportunities
- Financial empowerment (through jobs and property ownership) is noted as a crucial factor for gender equality, as well as economic growth
- More inclusive roles for women in areas of politics, science, and technology. Concerns are voiced about the lack of females in leadership positions despite policies encouraging this
- To help counter gender-based violence in society
- To improve access to health care services, with emphasis on reproductive health services

Respondents who did not believe that there was a demand for this research argued alternatively, that:

- It is a topic which has been “overdone” with much research in this field already undertaken
- Research in this area is not relevant to their country or culture
- It is not a prevalent issue in their country, in comparison to the West. They state that a lot has already been done in African countries to combat gender inequality, and this makes it less of an in-demand issue
- Gender research is not the issue; the problem is policy, the lack of action, and intrinsic behaviours
- It is not a high priority when compared to other social issues

“ The issue of access to different policy interventions, and their differentiated impact could still be important. But how to measure gender equality is something I am not comfortable with as it is done currently. – *Research/academia, Ethiopia* ”

“ In corporate governance, research should be undertaken to determine the role and contribution of either gender in both public and private sector – *NGO, Kenya* ”

“ The shortfall for the economy of Senegal due to the low involvement of women in decision-making/politics/policies etc. – *Multilateral/bilateral, Senegal* ”

“ Studies that are related to female entrepreneurs and the challenges they face in the industry. I am interested in research that intends to tackle this issues. – *Private Sector/industry association, Ethiopia* ”

“ The people do not see it to be a major issue – *Media, Ghana* ”

“ Because our culture and civilization does not teach us this – *Private sector/industry association, Senegal* ”

“ There is a lot of research which has been done on Gender. Evidence is not a problem for gender, but rather action and policy – *Research/academia, Ethiopia* ”

“ It is not a big issue in Ghana like in the western world – *Private sector/industry association, Ghana* ”

Information Required for Policy Making in Africa: Type, Accessibility, Format

Accessibility of Information

Africa Level

- Over the past eight years, the ease of obtaining information related to policy making has increased for most issues. Roughly half of stakeholders report that finding information on the SDGs, education, and gender issues is “easy,” while roughly a third report the same for natural resources and agriculture/food security.
- When cross-examining the ease of finding information versus the types of information required, it becomes clear that overall, information that stakeholders deem to be of highest value is also relatively easier to obtain. The only exception is information on agriculture / food security, which is considered highly important, but less easy to obtain than most other issues.

Stakeholder Level

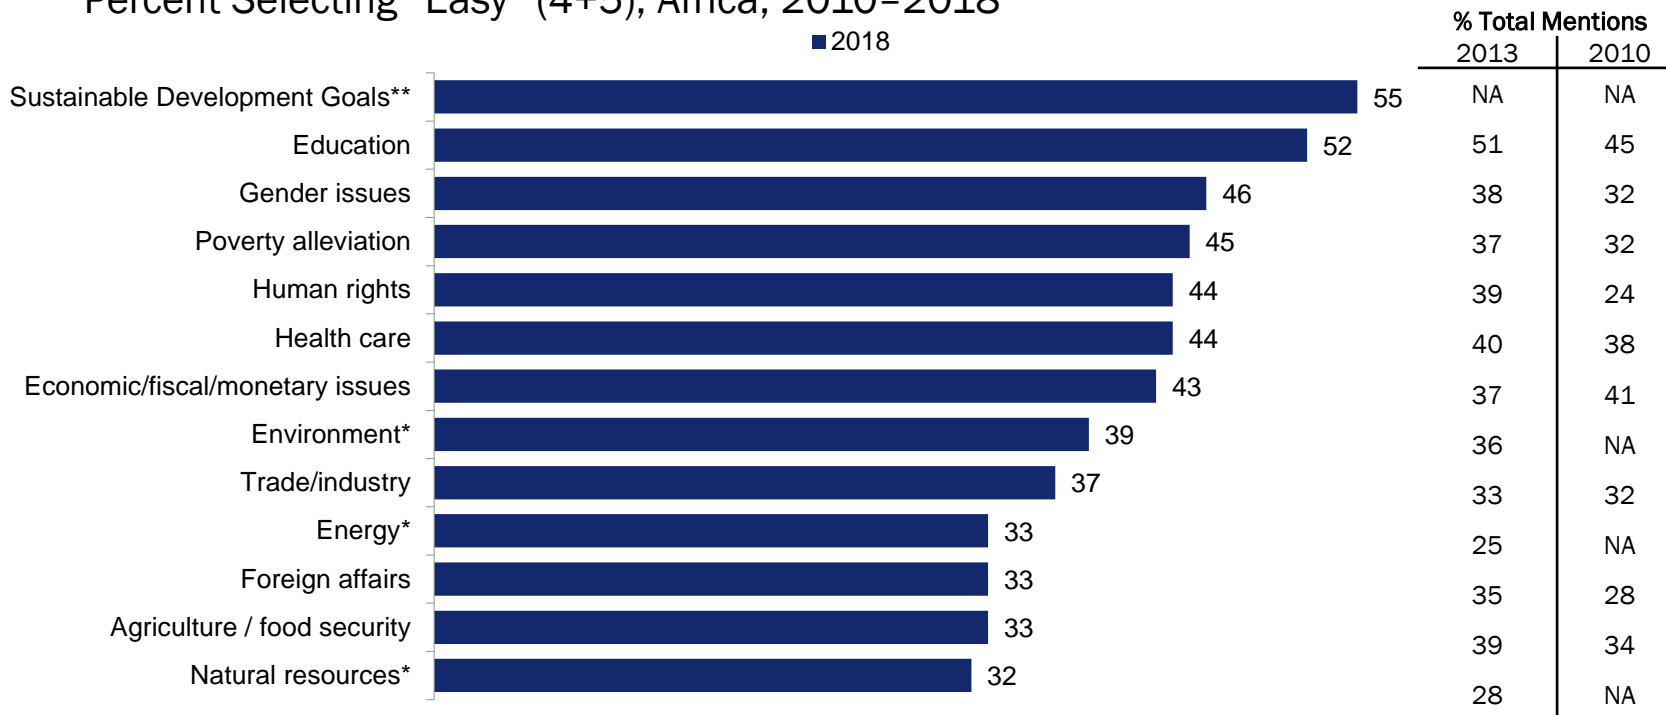

- Relative to 2013, information on human rights appears to be far more accessible to stakeholders from the private sector and multilaterals/bilaterals. Similarly, those from NGOs and multilaterals/bilaterals report that it is far easier now to obtain information on gender issues. Meanwhile, government stakeholders find that information on education is easiest to acquire.

Country Level

- The ease of obtaining information varies somewhat at the country level, with stakeholders from Kenya finding it easier to obtain information on agriculture/food security and poverty, while stakeholders from Rwanda are more likely to easily find information on gender issues and healthcare.

Ease of Obtaining Information to Support Policy Development in Following Areas

Percent Selecting “Easy” (4+5), Africa, 2010–2018

Information on the SDGs are more likely to be considered “easy” to obtain by stakeholders from NGOs, research/academia and media, and least “easy” among those from the private sector and elected government.

Subsample: Those who say they require information about this particular issue for their work (n=100–279 in 2010, n=133–281 in 2013, n=72–182 in 2018)

“Environment,” “natural resources,” and “energy” were combined in one response option in 2010 (26% selected “easy” (4+5)) but were segmented in 2013.

** “Sustainable Development Goals” was added as a new metric in 2018

Subsample: Those who require information about this particular issue for their work ($n=3-32$ in 2010, $n=3-35$ in 2013, $n=2-33$ in 2018)

• “Environment,” “natural resources,” and “energy” were combined in one response option in 2010, but were segmented in 2013.

• ** “Sustainable Development Goals” were added as a new metric in 2018

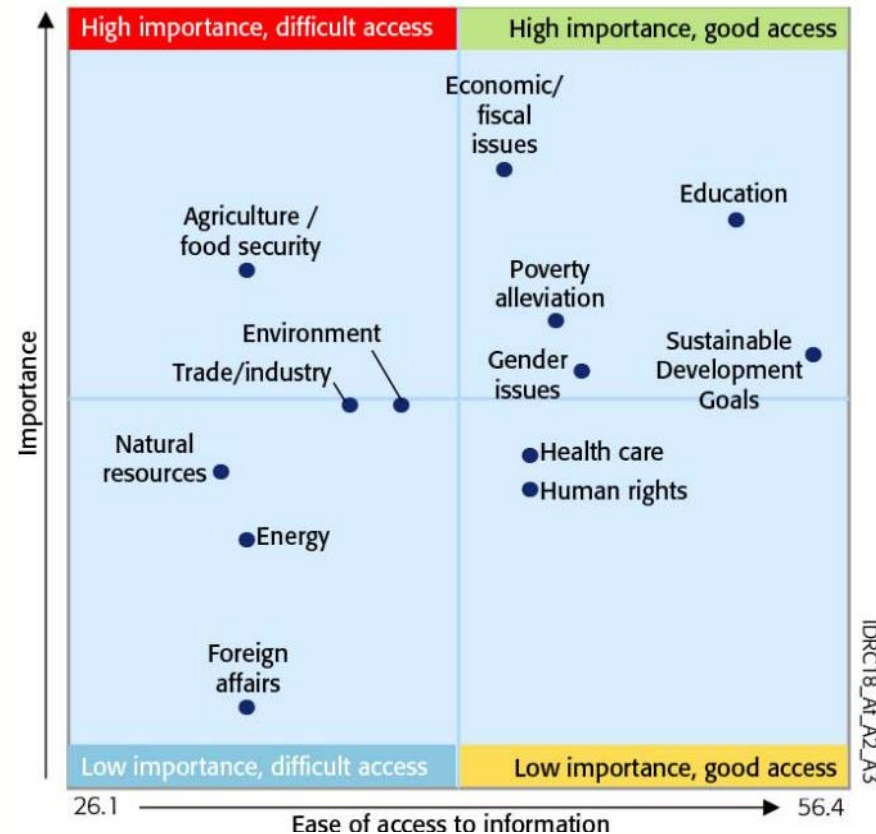

† Small sample sizes for some issues within some stakeholder groups ($n<10$).

Importance vs Ease of Access to Information

Total Mentions of Information Topic vs Respondents Selecting “Easy” (4+5), Africa, 2018

Overall, the information that respondents require the most for their work in national policy tends to be the information that is most easily obtainable.

However, information on agriculture and food security, a topic of relatively high importance, is relatively less easy to obtain than most other issues.

Information Required for Policy Making in Africa: Type, Accessibility, Format

Preferred Format of Information

Africa Level

- Websites, email, and print remain the most useful formats for receiving information for national policy development. However, interest in these formats has declined somewhat for all three (particularly print), in favour of social media. One in four – up from 9% in 2010 – now see this as one of the most useful formats for receiving information.

Stakeholder Level

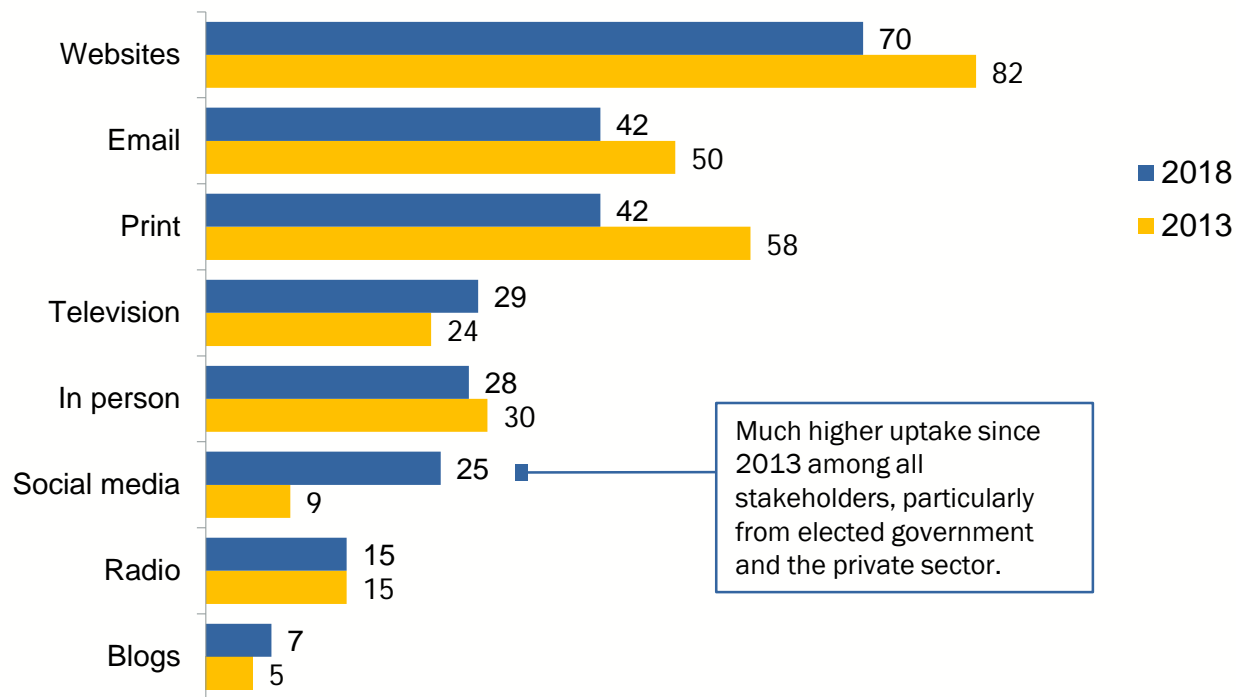

- Stakeholders from the private sector are more likely to find that information from television and social media is useful for policy development, while those from NGOs and research/academia are more likely to favour websites and email, respectively. Respondents from media have a generally balanced view of most formats, aside from blogs, which nearly all stakeholders consider to be least useful.

Country Level

- Traditional media such as radio is more likely to be preferred by stakeholders in Ghana, while personal contact is more likely to be considered useful by stakeholders in Kenya and Nigeria. However, stakeholders from Nigeria are also more likely to find social media useful, while stakeholders in Kenya view this format as least useful.

Most Useful Format for Receiving Information for National Policy Development

Information Required for Policy Making in Africa: Source and Quality

Information Required for Policy Making in Africa:

Source and Quality

Preferred Source of Information

Africa Level

- As in 2013, stakeholders rely heavily on reports and publications to increase their understanding of national policy development. Conferences/events and discussion with colleagues/peers are also relied on by the majority of stakeholders, despite a slight decrease in reported use. Policy briefs are used by half of respondents.
- Just over half of respondents (55%) report that they use databases and statistical data banks to increase their understanding of national policy; however, this is a considerable drop from 2013 where nearly three in four (73%) reported the same.
- Newsletters and books are the two sources selected least by nearly all stakeholders.

Stakeholder Level

- NGOs and those from multilateral/bilateral organizations and elected government, are most likely to utilize policy briefs, while stakeholders from media, and research/academia are more likely to have a preference for conferences/events to bolster their understanding of national policy development.

Country Level

- Information received via mainstream news (e.g., newspapers, radio, TV) are favoured more by stakeholders from Nigeria and Senegal, while respondents in Kenya have an above-average interest in consulting with experts to gain knowledge on national policy development.
- Stakeholders in Ethiopia have an above average interest in databases and statistical data banks, while stakeholders in Uganda are more likely to turn to their colleagues/peers to increase their understanding of national policy development.

Information Required for Policy Making in Africa:

Source and Quality

Preferred Organizations for Research-Based Evidence

Africa Level

- As in previous waves of this study, relevant government ministries/agencies are the most preferred institutions that stakeholders turn to when they require information related to social and economic policies.
- Government-owned research institutes and international agencies are also selected as a primary source by half of all stakeholders.
- National and international think tanks trail only slightly behind, with roughly four out of ten stakeholders reporting that each is a “primary source.”
- Relevance and quality of research are the top two reasons why stakeholders consider an organization their primary source of information. As in previous years, lack of familiarity is the main reason why some stakeholders never use national think tanks when looking for research-based evidence.

Stakeholder Level

- Both elected and non-elected government officials look inwards and heavily rely on relevant government ministries/agencies and government-owned research institutes for information on social and economic policies. Government stakeholders are also least likely to report that they use national think tanks (<30%) as a “primary source,” whereas stakeholders from the media, NGOs, and research/academia report a much higher usage (>50%).

Country Level

- Stakeholders in Tanzania and Ghana are most likely to turn to national think tanks, while their counterparts in Nigeria and Uganda are least likely to do so.
- Unlike all other countries, respondents in Ghana are more likely to turn to national think tanks than relevant government ministries/agencies when they require research-based evidence.
- Members of the policy community in Ethiopia have an above-average preference for both national and international university-based research institutes when seeking information on social and economic policies.

Types of Organizations Used as a Source of Research-Based Evidence

Percent of Respondents Selecting “Primary Source” (4+5), Africa, 2010–2018

* “Independent policy research institute” and “University-based research institute” were included as response options in 2010, but were segmented further into “National” and “International” options in the 2013 survey. The 2010 data is therefore repeated across the National and International Samples for general comparability.

Information Required for Policy Making in Africa:

Source and Quality

Quality Ratings of Organizations Providing Policy Information

Africa Level

- National think tanks tend to position well, being perceived as providing relatively good quality research.
- When looking strictly at quality of research, stakeholders give top marks to international university-based research institutes, with just over six out of ten rating them as “Excellent,” a 10 percentage point increase from 2013. International agencies and international think tanks maintain a similarly high rating, with minimal change from the previous wave, while national think tanks follow slightly behind with just over half of stakeholders (54%) rating them as “Excellent.” However, international think tanks and university-based research institutes are not used as frequently as other organizations, likely due to lower accessibility, familiarity, or relevance.
- Although government-owned research institutes and relevant government ministries are generally referred to most often for information on social and economic policies, their quality of research is moderate with about four out of ten stakeholders rating them as “Excellent.”

Stakeholder Level

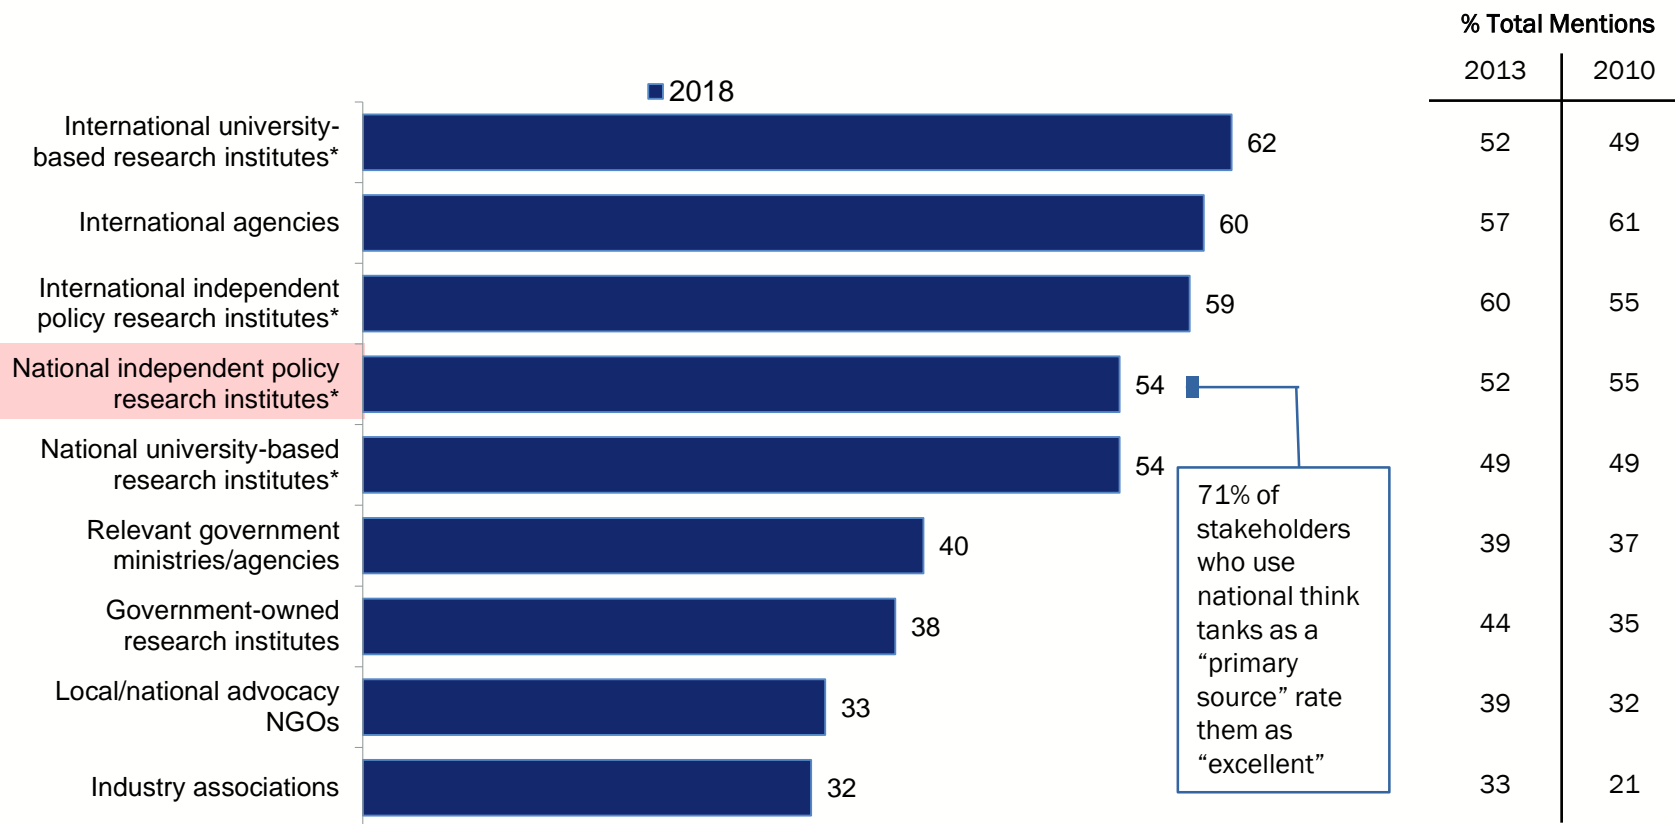

- Quality ratings of national think tanks are highest among those in research/academia and the media, and lowest among stakeholders from multilateral/bilateral organizations. Meanwhile, government stakeholders are most likely to give higher ratings to government-owned research institutes and much lower ratings to local/national advocacy NGOs.

Country Level

- Stakeholders in Kenya are far more likely to give higher ratings of research quality to national think tanks and government-owned research institutes, while their peers in Nigeria are more likely to give the lowest ratings to these two organization types, and give above-average ratings to international agencies.
- Perceptions of quality of national think tanks could be improved in Nigeria, Rwanda, Uganda and Senegal.
- For national think tanks, perceptions at the country level follow a roughly linear pattern, where high perceptions of quality result in higher usage, and vice versa.

Quality Ratings of Research Provided by...

Percent of Respondents Selecting “Excellent” (4+5), Africa, 2010–2018

Subsample: Those who use each type of organization ($n=263-384$ in 2010, $n=273-380$ in 2013, $n=266-318$)

*“Independent policy research institute” and “University-based research institute” were included as response options in 2010, but were segmented further into “International” and “National” options in the 2013 survey. The 2010 data is therefore repeated across the National and International Samples for general comparability

Quality Ratings of Research Provided by Think Tanks

Percent of Respondents Selecting “Excellent” (4+5), by Country, Africa, 2010–2018

Quality of Research vs Frequency of Use

Percent of Respondents Saying Quality of Research “Excellent” (4+5) vs Use as a “Primary Source” (4+5), Africa, 2018

Although international university-based research institutes and international think tanks enjoy high ratings of research quality, they are used relatively less frequently than other sources. This may be due to lower familiarity, accessibility or relevance.

National think tanks are straddling middle ground – seen as good quality with good usage. A boost in their profile would like increase frequency of use as perceptions of quality are already good in many countries.

Quality vs Frequency of Use of Research Provided by Think Tanks

Percent of Respondents Saying Quality of Research “Excellent” (4+5) vs Use as a “Primary Source” (4+5), by Country, 2018

Familiarity and Level of Interaction with Think Tanks

Familiarity with Think Tanks

- Respondents in Ghana, Kenya, Tanzania, and Ethiopia are generally more familiar with the rated think tanks, while those in Nigeria and Rwanda are far less familiar. Stakeholders from Rwanda in particular are far less familiar with the think tanks tested relative to 2013, while familiarity with think tanks in Ethiopia has increased substantially over the same period.

Level of Interaction

- Overall, stakeholders who are familiar with the think tanks rated are most likely to see or hear them mentioned by a trusted colleague or contact, or encounter their work in the media at least every couple of months. About a third of respondents overall report that they interact with the think tanks through their websites at least every couple of months.
- Only a minority of respondents familiar with the rated think tanks read their annual reports or attend events organized on a regular basis.

Familiarity with Prompted Think Tanks

Think Tank Performance Ratings

Africa – overall average*

- Overall, perceived performance across all think tanks tested has remained relatively stable since 2013, with performance on knowledge of policy-making rated highest along with quality of research. Having adequate infrastructure to function effectively and engaging in research on gender empowerment and women's equality are areas where perceived performance is considered lowest.

Ethiopia

- Perceived performance of think tanks in Ethiopia trail behind the Africa average on many attributes. On knowledge of policy-making processes, Ethiopian think tanks receive higher than average performance ratings, but fall behind the continental average on transparency, innovation in research, and making partnerships with non-government policy actors. Since 2013, perceived performance on quality of research and researchers has improved somewhat and is almost at par with the Africa average.

Ghana

- Think tanks in Ghana generally enjoy above-average performance ratings across most metrics despite a drop in perceptions on most measures since 2013. Quality of research and having a focus on high-priority issues are the two areas where performance is deemed highest, while its efforts toward gender equality/women's empowerment research and having adequate infrastructure are areas that receive the lowest performance scores.

Kenya

- The think tanks tested in Kenya are perceived to perform above average on nearly all metrics, particularly on the quality of researchers, where it scores highest and has improved notably since 2013. Other areas of notable improvement are having an innovative approach to research and the value of in-person events. Similar to most other countries, research on gender equality/women's empowerment is perceived to be its weakest performing area.

*To view individual ratings of each think tank test, please refer to the companion document to this study titled, "Think Tank Fact Sheets – African Countries" for an overview of key performance measures on specific think tanks in each country.

Think Tank Performance Ratings

Nigeria

- Perceived performance of think tanks tested in Nigeria is below average on all metrics and trailing behind ratings of previous years for most measures. The most pronounced negative gap with the Africa average relates to the value of in-person events and the quality of researchers and research. This may be partly due to the relatively low level of familiarity that respondents have with these think tanks.

Rwanda

- Think tank performance ratings in Rwanda vary considerably relative to previous years and are mostly below the Africa average. On regional knowledge, the think tanks enjoy above-average ratings and also score highly on knowledge of policy-making processes. However, stakeholders report that performance has slipped on clear communication of mission/programs and on having adequate infrastructure to function effectively. These results must be viewed with caution as the sample composition for Rwanda is not as balanced as in previous waves, with low representation from government stakeholders and a high proportion of feedback from those in the NGO and private sector.

Senegal

- On the whole, performance ratings of think tanks tested in Senegal align closely with the Africa average. However, metrics related to the quality of researchers, transparency, and the value of in-person events are areas where performance is above average, with notable improvement since 2013.

Tanzania

- Performance scores of think tanks in Tanzania are generally above the Africa average despite being slightly below 2013 ratings on most measures. Quality of research is one area where perceived performance is notably higher than in the previous wave. Think tanks tested in Tanzania also enjoy the highest positive ratings of performance on transparency relative to other countries. However, these findings must be viewed with caution the sample this wave is represented by a high proportion of elected government officials relative to previous waves.

Uganda

- Think tanks in Uganda score above the Africa average on most metrics, with performance perceived to be highest on knowledge of the policy-making process and quality of researchers. Performance on engagement with policy makers and gender empowerment/equality research is also fairly strong and higher than in all other countries.

Factors for Improving Think Tank Performance

Importance of Factors for Improving Performance

Africa Level

- Factors for improving national think tank performance have remained fairly consistent since 2010, with improved quality of research and increasing the availability of trained/experienced staff rated as most “important,” while incorporating gender considerations in institutional policies/practices and in research are deemed relatively less important.
- The diversification of sources of funding is one area that has seen an increase in ratings of “important” (72%, up 9 percentage points from 2013).

Stakeholder Level

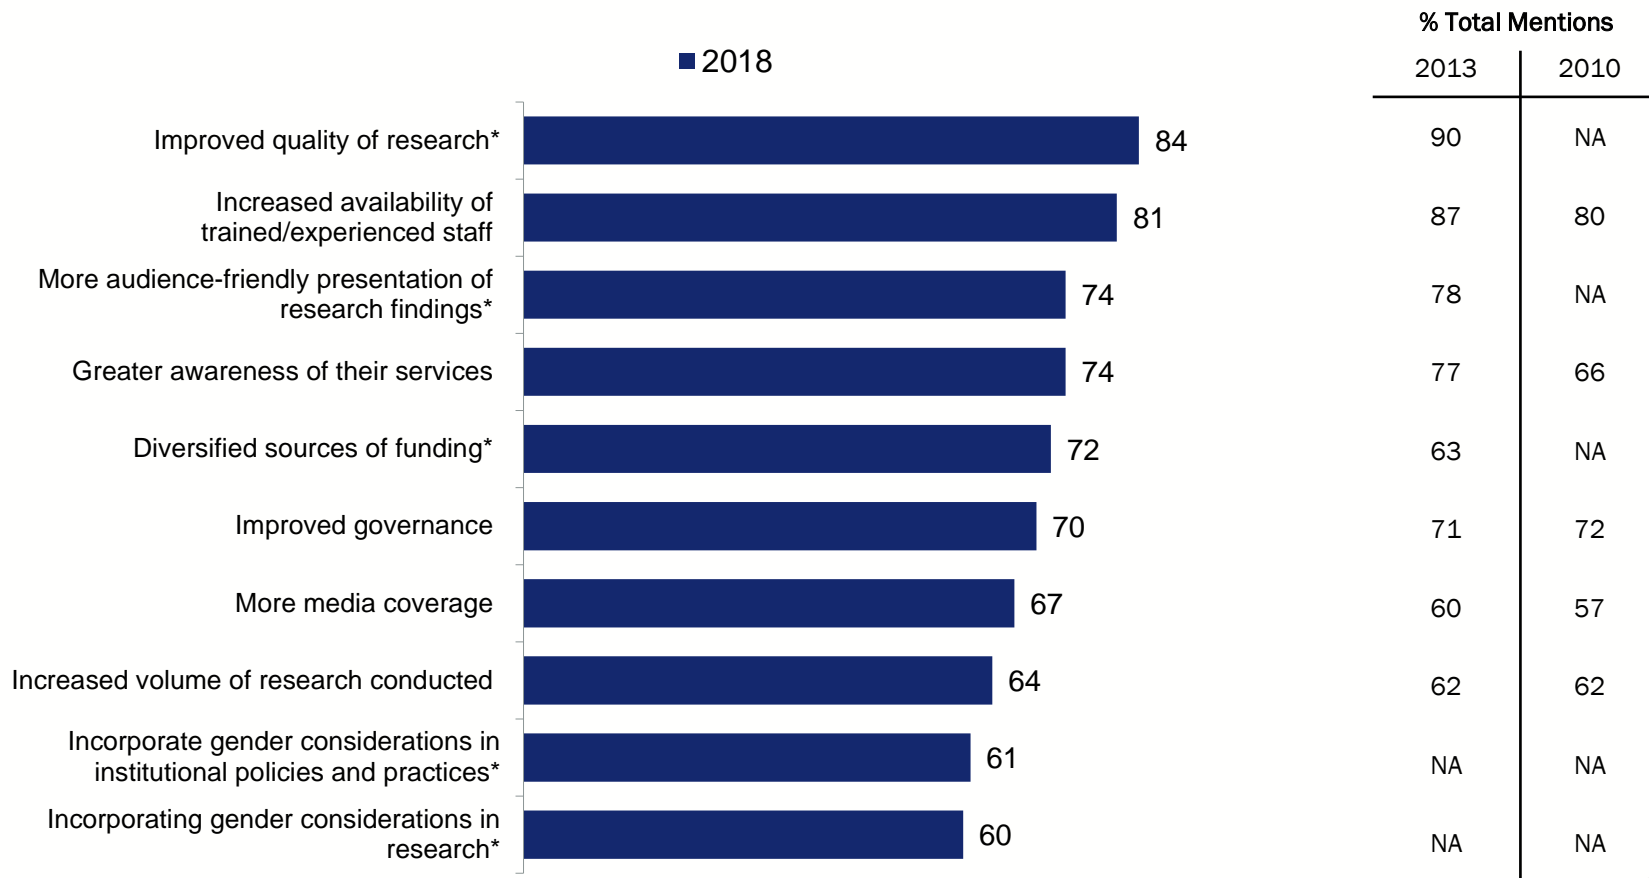

- Across stakeholder groups there is little variation in opinion regarding the most important factors for improving think tank performance. Respondents from the media are the strongest believers that more audience-friendly presentations of research findings are necessary to improve performance, while those from NGOs are more likely to be concerned about improved governance.

Country Level

- Overall, improving the quality of research is considered the number one factor for strengthening think tank performance; however, this feeling resonates more with respondents in Ethiopia and relatively less so with those in Rwanda.
- Respondents in Ethiopia and Senegal are more likely to believe that having more audience-friendly presentations of research findings is an important factor for improving performance, while their peers in Kenya are more likely to believe that diversifying sources of funding and improving governance are important factors.

Advice for independent policy research institutes to better assist stakeholders in their work

Open-end Responses, Africa, 2018

Advice for think tanks is relatively consistent, with many people mentioning the same recommendations across the board. Advice for think tanks focused on:

- Ensuring easy accessibility and timely dissemination of research results (through social media platforms and up-to-date websites) to ensure that information can be utilized
- General improvement of the quality of research
- Conduct studies that are relevant to the country, community, and society at large. These studies can be more beneficial for the development of the country, and can have a positive impact on policy
- Undertake wider and more representative research samples
- Avoiding political influence/sentiments. Concerns were expressed about the potential political bias of research, and how this should be avoided in order to maintain an objective output
- The need to conduct work with the public in mind. Many respondents recommend undertaking research which is of public interest, as well as the need to increase public involvement
- Increase interaction between think tanks, national/local research institutes, and government organizations. Collaboration and partnership with these organizations could drive policy impacts

“ Disseminate the research findings in a user-friendly manner; improve the quality and coverage of the research, as well as using diversified methodologies and methods in researching
– *Research/academia, Ethiopia* ”

“ Always engage the stakeholders in the conceptualization and conduct of survey. Always conduct wider validation on the findings so as to create demand and ownership.
– *Government, non-elected, Kenya* ”

“ Try to focus on real problems facing the country. Most studies conducted in the Country, in my opinion, are based on availability of funds for the study. They are supply based not demand based.
– *Government, elected, Ethiopia* ”

“ They should be independent of all forms of political influence and interference – *Government, non-elected, Ghana* ”

“ Work in perfect collaboration with partners and sources concerned in order to facilitate the accessibility of information and promote better information management
– *Multilateral/bilateral, Senegal* ”

“ Greater political independence, greater rigor, better oral presentation/delivery of findings, better skill in designing and interpreting questionnaires and surveys.
– *Private Sector/Industry Association, Rwanda* ”

GlobeScan is an insights and strategy consultancy, focused on helping our clients build long-term trusting relationships with their stakeholders. Offering a suite of specialist research and advisory services, we partner with business, NGOs and governmental organizations to meet strategic objectives across reputation, sustainability and purpose.

Established in 1987, GlobeScan has offices in Cape Town, Hong Kong, London, Paris, San Francisco, São Paulo and Toronto, and is a signatory to the UN Global Compact and a Certified B Corporation.
