Think Tank Performance Ratings	55
Factors for Improving Think Tank Performance	67

# Introduction and Objectives

In 2009/10 and 2013, GlobeScan, a global stakeholder research consultancy, was commissioned by the Think Tank Initiative (TTI) to conduct a survey of policy stakeholders in three regions: Africa, Latin America, and South Asia.

In 2018, the TTI once again engaged GlobeScan to carry out the Think Tank Initiative Policy Community Survey in the same three regions.

Through the Policy Community Survey, the Think Tank Initiative aims to:

- Develop an understanding of the policy community in specific countries
- Understand the strengths and weaknesses of particular think tanks, as perceived by a subset of the policy community
- Understand what activities are associated with the success of think tanks in order to help prioritize support strategies such as funding, training, and technical assistance
- Benchmark and track broad changes in the policy community and perceptions of think tanks in selected countries

This report presents the results of the Latin American survey.

A global report will be prepared which presents an overview of the findings of the studies undertaken in all regions once they are completed.

# Executive Summary

# Executive Summary

## **Information needs of policy community have changed little, but ease of obtaining information has declined for some issues**

The information needs of the policy community have remained fairly stable over the past three waves of the study, with topics relating to economic/fiscal issues and poverty alleviation continuing to be of most interest. The UN Sustainable Development Goals (SDGs) rank second overall, while information related to education has fallen in importance. When prompted, stakeholders overwhelmingly agree that there is a demand for more information related to gender equality and women's empowerment. Meanwhile, the reported ease of obtaining information has slightly declined for most issues, particularly for gender issues, agriculture/food issues, and health care. While the information that stakeholders demand the most tends to be the easiest to obtain in relative terms, there is much room for improvement in general with regards to the accessibility of information.

## **Email, websites, and reports and publications continue to be top format/source of policy information, but social media is on the rise**

Email, websites, and print remain the top formats/sources that are considered useful for receiving information for policy development by the vast majority of stakeholders. However, stated usage is somewhat lower than in the past, with some possibly now looking to social media which enjoys a considerable increase from last wave in perceived usefulness across all stakeholder groups, particularly those from trade unions.

Stakeholders utilize a multitude of sources when seeking information to increase their understanding of policy development. Publications/reports, databases/statistical data banks, and discussions with colleagues/peers are the most commonly used sources, consistent with 2013.

## **Relevant government ministries remain the top organization that stakeholders turn to for information on social and economic policies, likely due to greater alignment; national think tanks rank second**

Stakeholders generally rely on government ministries/research institutes and national independent policy research institutes (i.e., think tanks) as top sources of information on social and economic policies. Although the perceived quality of government ministries/research institutes is fairly low, they are used quite frequently which is likely due to the close proximity of such institutions to government stakeholders and close alignment with issues related to national policy development.

# Executive Summary

**National think tanks enjoy fairly strong ratings on quality, but have room to improve awareness of their services and the development of partnerships with actors other than government**

Overall, the quality of research provided by national think tanks is seen as fairly good and this perception has improved slightly from the previous wave. Those from media, NGOs, and research/academia continue to rate national think tanks most highly in terms of quality. Government officials, who are most directly involved in policy development, are not far behind in their quality ratings for national think tanks. For the minority of stakeholders who say they do not turn to national think tanks, the main reason given is limited familiarity, followed by those saying they meet their research needs through other sources.

Across the region, the national think tanks tested are generally seen as performing well with regards to the quality of their research and researchers. Performance is seen to be lacking around having sufficient gender empowerment/equality research and developing partnerships with policy actors other than government.

## Implications

On the whole, perceptions of national think tanks in Latin America are generally positive, although there is room for improvement:

- Most stakeholders learn about national think tanks from second-hand sources or by encountering their work in the media. This shows that there is an opportunity for national think tanks to engage more directly with stakeholders to improve awareness of their capabilities. National think tanks should also explore social media opportunities, as this appears to be a growing platform for all stakeholders when searching for information to help with national policy development.
- Information on agriculture/food security is perceived to be the least easy to access by stakeholders, although it is needed by a significant proportion of respondents. Supplying more policy related information in this area could boost the profile of national think tanks and increase the perceived relevance of their work.
- As in other regions, focusing energy on gender empowerment/equality research could also be an opportunity for some national think tanks, as it is an area where nearly all think tanks tested are lacking, but also where demand is fairly strong. Other areas of strong interest, where access is not optimal are education and the environment.
- Nearly all national think tanks continue to be viewed as not having adequate infrastructure to function effectively. This problem will likely become more acute as the Think Tank Initiative wraps up in 2019. Focusing more energy on partnerships with policy actors outside of government may help to counteract this challenge, and developing partnerships is an area where national think tanks have much room for improvement.

# Methodology and Sample Composition

## Methodology

The survey of policy stakeholders was conducted through online, telephone, and face-to-face interviews in 7 Latin American countries from September 26<sup>th</sup>, 2017 to June 5<sup>th</sup>, 2018.

The participating Latin American countries are Bolivia, Ecuador, El Salvador, Guatemala, Honduras, Paraguay and Peru.

The survey was offered in Spanish.

	Total	Latin America						Peru
		Bolivia	Ecuador	El Salvador	Guatemala	Honduras	Paraguay	
<b>Total</b>	304	44	41	45	44	42	46	42
<b>Online</b>	82	15	6	8	16	5	19	13
<b>Offline</b>	222	29	35	37	28	37	27	29
Telephone	94	-	5	37	20	5	27	-
Face-to-face	128	29	30	-	8	32	-	29

# Methodology: Respondent Description

Respondents are from the following sectors:

- **\*Government:** Senior officials (both elected and non-elected) who are directly involved in or influence policy making.
- **Non-governmental organization:** Senior staff (local or international) whose mission is related to economic development, environmental issues, and/or poverty alleviation.
- **Media:** Editors or journalists who report on public policy, finance, economics, international affairs, and/or development, who are knowledgeable about national policy issues.
- **Multilateral/bilateral organization:** Senior staff from organizations run by foreign governments either individually (bilateral such as DFID, USAID) or as a group (multilateral such as UN agencies, World Bank).
- **Private sector:** Senior staff working at large well-known national and multinational companies.
- **Research/academia:** Senior staff at universities, colleges, research institutes, and/or think tanks.
- **Trade union officials:** Senior representatives of national trade unions.

Stakeholders surveyed are senior-level staff in their organizations and active members of the national policy community, meaning that they develop or influence national government policy. Efforts were made to ensure that no two stakeholders were interviewed from the same organization. For government stakeholders only up to two respondents could be from the same ministry, but must be from separate departments.

Stakeholder sample lists were provided by the International Development Research Centre (IDRC), a donor of the TTI, and TTI grantee organizations, and were supplemented by GlobeScan. GlobeScan stakeholder names were reviewed by the IDRC and grantee organizations. To minimize bias, interviews were conducted with a mixture of people – some sourced by grantee organizations and some sourced by GlobeScan.

# Methodology: Sample Summary

Number of Stakeholders Interviewed by Country, 2018

	Total	Latin America						
		Bolivia	Ecuador	El Salvador	Guatemala	Honduras	Paraguay	Peru

# Think Tanks Tested in Each Country and Number of Respondents Rating Each Think Tank

## Latin America, 2018

Country	Think tank	Sample size
Bolivia	Fundación ARU, Instituto de Estudios Avanzados en Desarrollo (INESAD)	20, 25
Ecuador	Fundación para el Avance de las Reformas y las Oportunidades (Grupo FARO)	27
El Salvador	Fundación Dr. Guillermo Manuel Ungo (FUNDAUNGO), Fundación Salvadoreña para el Desarrollo Económico y Social (FUSADES)	39, 41
Guatemala	Asociación de Investigación y Estudios Sociales (ASIES)	41
Honduras	Foro Social de Deuda Externa y Desarrollo de Honduras (FOSDEH)	27
Paraguay	Centro de Análisis y Difusión de la Economía Paraguaya (CADEP), Instituto Desarrollo (ID)	44, 39
Peru	Grupo de Análisis para el Desarrollo (GRADE), Instituto de Estudios Peruanos (IEP)	38, 39

# A Note on the Approach

**Views are not representative of the whole policy community.** The study was designed to gather views of *senior*-level policy actors within national policy communities on their research needs and their perceptions of think tanks' research quality and performance. The study was not intended to gather perceptions of a larger representative subset of the policy community which could generate statistically significant findings on demand for research. This approach was chosen consciously, recognizing the limitation it brings to the survey, but acknowledging the value of perceptions of individuals in senior positions within each national policy community who often are very difficult to reach.

These views provide the basis for reflection within the organizations supported by the TTI on how the organization's current performance is perceived by key stakeholders, and on ways in which the organization may enhance its organizational capacity to undertake policy-relevant research.

As was done for the Latin American survey in 2009/10 and 2013, we set a target of 40 respondents per country with a balanced quota of responses across different stakeholder categories.

Balanced quotas in each country were achieved with varying degrees of difficulty encountered in the data collection process.

## A Note on Charts:

All figures reported in the charts are expressed in percentages, unless otherwise noted. Some percentages may not add up to 100% due to the rounding of individual response categories or due to the fact that respondents could give multiple answers to a particular question ("total mentions" is then reported).

Please refer to the notes section on each slide to review actual question wording.

# Information Required for Policy Making in Latin America: Type, Accessibility, Format

# Information Required for Policy Making in Latin America: Type, Accessibility, Format

## Types of Information Required

### Latin America Level

- The types of information that members of the policy community desire has remained fairly consistent over the past three waves of this study, with economic/fiscal issues and poverty alleviation continuing to rank highest. However, the Sustainable Development Goals (SDGs), a new metric for 2018, has also placed among the highest (ranking second overall), while education has fallen from 60 percent in 2013 to 47 percent.
- When prompted, over three out of four respondents (78%) say that there is a demand for research relating to gender equality and women's empowerment.

### Stakeholder Level

- Aside from NGOs and those from trade unions and research/academia, all stakeholder groups are primarily interested in economic/fiscal issues, while poverty alleviation is more likely to be of interest among those from multilaterals/bilaterals and research/academia.
- NGOs show the greatest interest in information on human rights and the SDGs, while those in the private sector are more interested in trade/industry information.

### Country Level

- At the country level, respondents generally prioritize information on economic/fiscal issues with regards to policy making. However, respondents from Ecuador are far more likely to desire information on the SDGs than their counterparts in other countries. Similarly, respondents in Peru are more likely to seek information on gender issues and those from Paraguay are more interested in receiving information on poverty alleviation.
- Respondents from Ecuador have an above average interest in receiving information across all topic areas.

# Types of Information Required for Policy Making

Prompted, Multiple Responses Allowed, Latin America, 2010–2018

While economic/fiscal/monetary issues remain in the top spot for information needs, the SDGs, a new metric for 2018, have placed second.

\* “Environment,” “natural resources,” and “energy” were combined in one response option in 2010 (selected by 50% of respondents), but were segmented in 2013.

\*\* “Sustainable Development Goals” was added as a new metric in 2018

# Types of Information Required for Policy Making

# Demand in Your Country for Information on Gender Equality and Women's Empowerment

Percent of Stakeholders, by Stakeholder Type and Country, Latin America, 2018

# Is there a demand for gender equality and female empowerment research, and why?

Open-end Responses, Latin America, 2018

Those who say there is a demand for gender equality and female empowerment research in their country demonstrate interest in the following areas:

- The role of women in the economy and politics
- Eradication of discrimination and violence against women and young girls
- Equity among genders in the workforce, particularly around job opportunity and income
- Access to training and development for women, as well as long-term social security
- Healthcare access and reproductive rights
- Political representation and the impact of women in government
- The differentiated impact of social policies on women and young girls
- Access to bank credit for young women and inclusion in the formal economy
- Recognition of women's work, particularly manual labor and housework
- Female trafficking

Respondents who do not believe that there is a demand for this research give the following reasons why:

- The topic is only of interest to academics or professional researchers, but is not a priority area for government or the general public
- It is too difficult a topic to study or find information on
- Research resources are scarce and should be focused on other issues of higher priority
- It is not relevant to the national agenda or culture

“

Equality, equity, security, recognition of the work of the women in the house, greater opportunity for young women

– *Multilateral/bilateral, Paraguay*

”

“

Equity, prevention of gender violence, greater access to jobs and respect for women's politics

– *NGO, Honduras*

”

“

Violence, labor legislation for women, impact on the development of the country, gender equality in matters of development of the country

– *Multilateral/bilateral, Ecuador*

”

“

Most basic issues: violence against women, equal opportunities from childhood, access to labor market (how to facilitate it)

– *Private sector/industry association, Peru*

”

“

Although some organizations require it, the issue unfortunately is not yet of real relevance in the national agenda

– *NGO, Guatemala*

”

“

There are other priorities and resources are scarce.

– *Government, Non-Elected, Paraguay*

”

“

There is no need for this type of research, except for a small group of professionals and academics

– *Peru, NGO*

”

# Information Required for Policy Making in Latin America: Type, Accessibility, Format

## Accessibility of Information

### Latin America Level

- Over the past eight years, the ease of obtaining information related to policy making has remained relatively stable or slightly declined for most issues, aside from a significant increase on the ease of obtaining information on energy related issues.
- The ease of obtaining information on gender issues, health care, and agriculture/food issues have dropped significantly from 2013.
- The majority of respondents do not considered it “easy” to obtain information across all topic areas.

### Stakeholder Level

- Respondents from the private sector and multilateral/bilaterals are likely to view information on foreign affairs as most accessible, while media stakeholders report that information on trade/industry is easiest to obtain.
- Respondents from multilateral/bilateral organizations report that they find it much easier to find information on environment than other stakeholders.
- Media and private sector stakeholders report they have a more difficult time obtaining information on the SDGs than all other stakeholder groups.

### Country Level

- Stakeholders from Ecuador, Paraguay, and Peru find it relatively easier to obtain information on economic/fiscal issues, while stakeholders from Guatemala are more likely to find information on trade/industry issues most accessible.
- Stakeholders from El Salvador report it is easiest to obtain information on the SDGs while those in Peru say it is least easy to obtain.

# Ease of Obtaining Information to Support Policy Development in Following Areas

Percent Selecting “Easy” (4+5), Latin America, 2010–2018

Subsample: Those who say they require information about this particular issue for their work ( $n=120-226$  in 2010  $n=105-196$  in 2013,  $n=79-175$  in 2018)

“Environment,” “natural resources,” and “energy” were combined in one response option in 2010 (26% selected “easy” (4+5)) but were segmented in 2013.

\*\* “Sustainable Development Goals” was added as a new metric in 2018

# Importance vs Ease of Access to Information

Total Mentions of Information Topic vs Respondents Selecting “Easy” (4+5), Latin America, 2018

Overall, the information that respondents require the most for their work in national policy tends to be the information that is most easily obtainable.

However, information on education, the environment and gender issues, topics of relatively high importance, are relatively less easy to obtain than most other issues.

# Information Required for Policy Making in Latin America: Type, Accessibility, Format

## Preferred Format of Information

### Latin America Level

- While websites, email, and print remain the most useful formats for receiving information for national policy development, interest in all of these formats has declined, with the most notable decline in print. Interest in social media, however, has increased (by 12%) since 2013.

### Stakeholder Level

- Non-government officials, research/academics, trade union and multilateral/bilateral stakeholders are more likely to find information from email most useful for policy development, while those from elected government, media, NGOs, and private sector are more likely to favour websites.

### Country Level

- Stakeholders in Bolivia, Ecuador, and Peru are more likely to prefer websites, while their counterparts in El Salvador, Guatemala, Honduras, and Paraguay are more likely to favour email as the most useful format for policy development information.
- Respondents in Peru and Ecuador are more likely to prefer print as a format of information compared to those in the other countries surveyed, while stakeholder in Honduras are more likely to turn to social media.

# Information Required for Policy Making in Latin America: Source and Quality

# Information Required for Policy Making in Latin America:

## Source and Quality

### Preferred Source of Information

#### Latin America Level

- Despite considerable declines across all information sources, the ranking of these sources has remained consistent since 2013 with reports and publications remaining the primary source. These declines likely indicate that stakeholders have become more focused in the sources of information they use.
- Books and newsletters are the two least-used sources.

#### Stakeholder Level

- Elected government officials are most likely to utilize discussions with colleagues/peers, while stakeholders from multilateral/bilateral organizations are more likely than other stakeholders to prefer consulting with experts, attending conferences/events, and utilizing policy briefs to increase their understanding of national policy development.
- Stakeholders from NGOs and the private sector are more likely than their peers to turn to information via the news, while those from trade unions have a strong preference for receiving their information via the news.

#### Country Level

- Stakeholders in Peru are more likely than peers in other countries to utilize books and information received via the news in order to gain knowledge on national policy development.
- Respondents from Ecuador and Paraguay are more likely to favour databases/statistical data banks than their counterparts in other countries.

# Information Required for Policy Making in Latin America:

## Source and Quality

### Preferred Organizations for Research-Based Evidence

#### Latin America Level

- Consistent with the 2013 wave of this study, relevant government ministries/agencies are the most preferred institutions that stakeholders turn to when they require information related to social and economic policies.
- National independent policy research institutes trail only slightly behind, with just over half of respondents reporting they use these institutes as a “primary source.”
- Quality and relevance of research are the top two reasons why stakeholders turn to national think tanks as their primary source of information. As in previous years, lack of familiarity continues to be the main reason why some stakeholders never use national think tanks.

#### Stakeholder Level

- Stakeholders from the media, NGOs, multilaterals/bilaterals, and research/academia are most likely to use national think tanks (>62%), while those from the private sector, trade unions or government are less likely (<41%). Both elected and non-elected government officials heavily rely on relevant government ministries/agencies and government-owned research institutes for their policy needs while those in the private sector rely more so on international agencies.

#### Country Level

- Stakeholders in El Salvador are most likely to use national independent policy research institutes for information regarding social and economic policy, while those in Paraguay are least likely to do so.
- Respondents in Ecuador and Honduras are more likely to turn to government-owned research institutes and government ministries/agencies for their policy needs.
- While respondents in Peru are slightly more likely to use relevant government ministries/agencies (64%), they still report relatively high usage of national think tanks (62%).

# Types of Organizations Used as a Source of Research-Based Evidence

Percent of Respondents Selecting “Primary Source” (4+5), Latin America, 2010–2018

\* “Independent policy research institute” was included as a response option in 2010, but was segmented further into “National” and “International” options in the 2013 survey. The 2010 data is therefore repeated across the National and International samples for general comparability.

Subsample: Those who say they use type of institute as a primary source of policy information

(5 on 5-point scale) (n=20–85 in 2010, n=18–76 in 2013, n=24–83 in 2018)

\* “Independent policy research institute” was included as a response option in 2010, but was segmented further into “National” and “International” options in the 2013 survey. The 2010 data is therefore repeated across the National and International samples for general comparability.

# Reasons For Turning to National Think Tanks for Research-Based Evidence

Prompted, Latin America, 2010–2018

Subsample: Those who have used national independent policy research institutes when looking for research-based evidence ( $n=71$  in 2010,  $n=66$  in 2013,  $n=55$  in 2018)

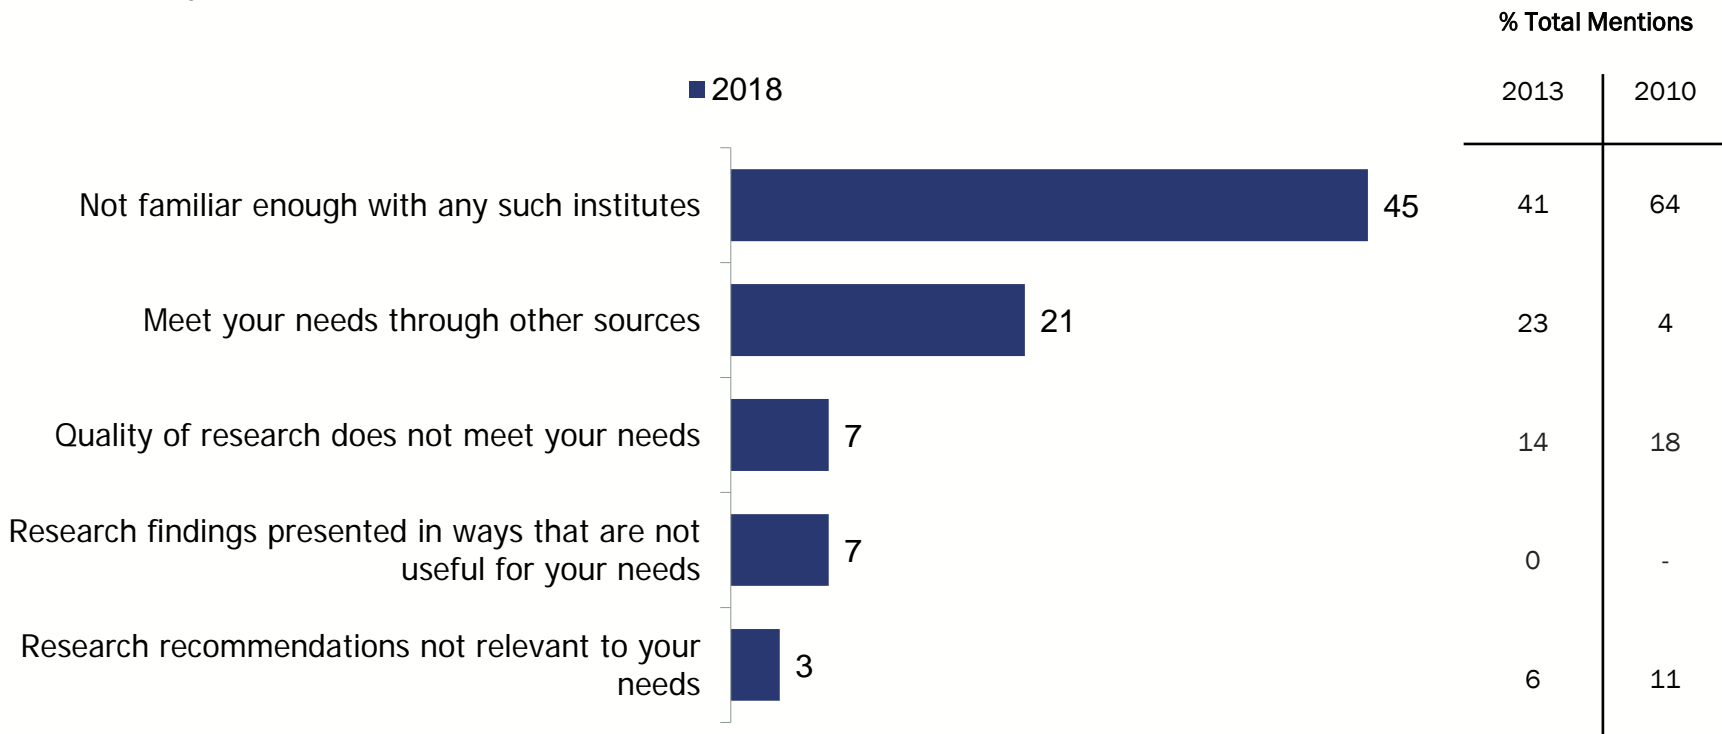

Single mentions and “don’t know” not included in the chart

\* “Independent policy research institute” was included as a response option in 2010, but was segmented further into “National” and “International” options in the 2013 survey.

# Reasons for Not Turning to National Think Tanks for Research-Based Evidence

Prompted, Latin America, 2010–2018

Subsample: Those who have never used national independent policy research institutes when looking for research-based evidence ( $n=28$  for 2010,  $n=33$  for 2013,  $n=29$  for 2018)

Single mentions and “don’t know” not included in the chart

\* “Independent policy research institute” was included as a response option in 2010, but was segmented further into “National” and “International” options in the 2013 survey.

# Information Required for Policy Making in Latin America:

## Source and Quality

### Quality Ratings of Organizations Providing Policy Information

#### Latin America Level

- National think tanks are perceived to provide excellent quality research by well over (62%) of stakeholders, but trail behind international agencies, international think tanks and international university-based research institutes.
- Although government-owned research institutes and relevant-government ministries are among the most preferred sources for policy information, the quality of their research is rated lower than other institutions that are less preferred.

#### Stakeholder Level

- International university-based research institutes are given the highest quality ratings across all stakeholder groups except those from trade unions, who are more likely to favour international think tanks.
- Quality ratings of national think tanks are highest among those in research/academia, NGOs, multilaterals/bilaterals, and the media (>65% rating them as “Excellent”). Those from the private sector and trade unions give national think tanks the lowest quality ratings (<52%) compared to their peers.
- Non-elected government stakeholders perceive the quality of government-owned research institutes and relevant government ministries/agencies to be far higher than their counterparts in elected government.

#### Country Level

- Stakeholders in El Salvador are far more likely to give higher quality ratings to national think tanks (74%), while their peers in Bolivia and Honduras are more likely to give them the lowest ratings (<56%).
- International university-based research institutes, international independent policy research institutes, and international agencies are rated among the highest in terms of quality across all countries despite comparatively low usage.

# Quality of Research vs Frequency of Use

Percent of Respondents Saying Quality of Research “Excellent” (4+5) vs Use as a “Primary Source” (4+5), Latin America, 2018

As in other regions, international university-based research institutes enjoy high ratings of research quality, but they are used relatively less frequently than other sources which is likely due to lower familiarity, accessibility or relevance.

National think tanks are well positioned as they are viewed as being of high quality and usage is also high. Greater familiarity with national think tanks will likely increase their frequency of use, as this is the main reason given by stakeholders for not utilizing them.

# Quality vs Frequency of Use of Research Provided by Think Tanks

Percent of Respondents Saying Quality of Research “Excellent” (4+5) vs Use as a “Primary Source” (4+5), by Country, 2018

National Independent Think Tanks

International Independent Think Tanks

# Familiarity and Level of Interaction with Think Tanks

## Familiarity with Think Tanks

- Respondents in Guatemala and El Salvador are generally more familiar with the rated think tanks, along with those in Paraguay and Peru. Those in Bolivia and Ecuador are far less familiar. Familiarity with the prompted think tanks has increased in Paraguay relative to 2013, but declined in most other countries.

## Level of Interaction

- Overall, stakeholders who are familiar with the think tanks rated are most likely to see or hear them mentioned by a trusted colleague or contact, or encounter their work in the media at least every couple of months.
- Only a minority of respondents familiar with the rated think tanks read their annual reports.

# Familiarity with Prompted Think Tanks

Percent of Respondents “Familiar” (4+5) with Prompted Think Tanks, by Country, Latin America, 2010–2018

# Think Tank Performance Ratings

## Latin America – overall average\*

- Overall, perceived performance across all think tanks tested has remained relatively stable since 2013, with performance on quality of research and researchers rated highest. Research on gender empowerment and women's equality as well as partnerships with policy actors other than government are areas where perceived performance is considered lowest.

## Bolivia

- Perceived performance of think tanks in Bolivia have declined across most metrics since 2013 and ratings trail behind the Latin America average on all attributes. The most pronounced negative gap with the Latin America average relates to performance on knowledge of policy-making processes and engagement with policy makers.

## Ecuador

- Think tank performance ratings in Ecuador are mostly below the Latin America average, aside from transparency and gender equality/empowerment research, where performance is slightly above average. The most significant performance drops since 2013 are on informed critique of public policy, partnership with policy actors other than government, and engagement with policy makers. Since 2013, perceived performance has improved slightly on quality of research and research dissemination.

## El Salvador

- The think tanks tested in El Salvador are perceived to perform well above average on all metrics, particularly on having adequate infrastructure to function effectively. Performance has either improved or remained stable since 2013, with the most notable improvements on partnerships with policy makers other than government, engagement with policy makers, informed critique of public policy, and clear communication of mission/programs.

\*To view individual ratings of each think tank test, please refer to the companion document to this study titled, "Think Tank Fact Sheets – African Countries" for an overview of key performance measures on specific think tanks in each country.

## Guatemala

- Think tank performance ratings in Guatemala vary considerably relative to previous years and are fairly similar to the Latin America average, aside from engagement with policy makers, partnership with policy actors other than government, knowledge of policy making processes, and regional knowledge, where performance is well above the average. The most notable declines since 2013 are on value of in-person events, having adequate infrastructure, transparency, research dissemination, and partnership with policy actors other than government.

## Honduras

- Performance scores of think tanks in Honduras are well above the Latin America average on almost all metrics, particularly on transparency and having an informed critique of policy. The greatest improvements in performance, relative to last wave, are on partnership with policy actors other than government and having an innovative approach to research.

## Paraguay

- On the whole, performance ratings of think tanks tested in Paraguay are consistent or slightly below the Latin America average, aside from performance on transparency, value of in-person events, partnership with policy actors other than government, and gender equality/empowerment research, where ratings are well below the average. Since 2013, there have been notable increases in performance on quality of researchers and informed critique of public policy, and a significant decrease on partnership with policy actors other than government.

## Peru

- Performance scores of think tanks in Peru have fallen considerably since 2013 across most measures, and are now fairly consistent with the Latin America average. The most notable declines since 2013 are on transparency, engagement with policy makers, clear communication of mission/programs, and adequate infrastructure to function effectively.

# Factors for Improving Think Tank Performance

## Importance of Factors for Improving Performance

### Latin America Level

- Factors for improving national think tank performance have remained fairly consistent since 2010, with improved quality of research and more audience-friendly presentation of findings rated as most “important,” while improved governance and increased media coverage are deemed relatively less important.
- The only significant change from previous waves of the study is a rise in the importance of greater awareness of services in improving think tank performance (73%, up 20 percentage points from 2013).

### Stakeholder Level

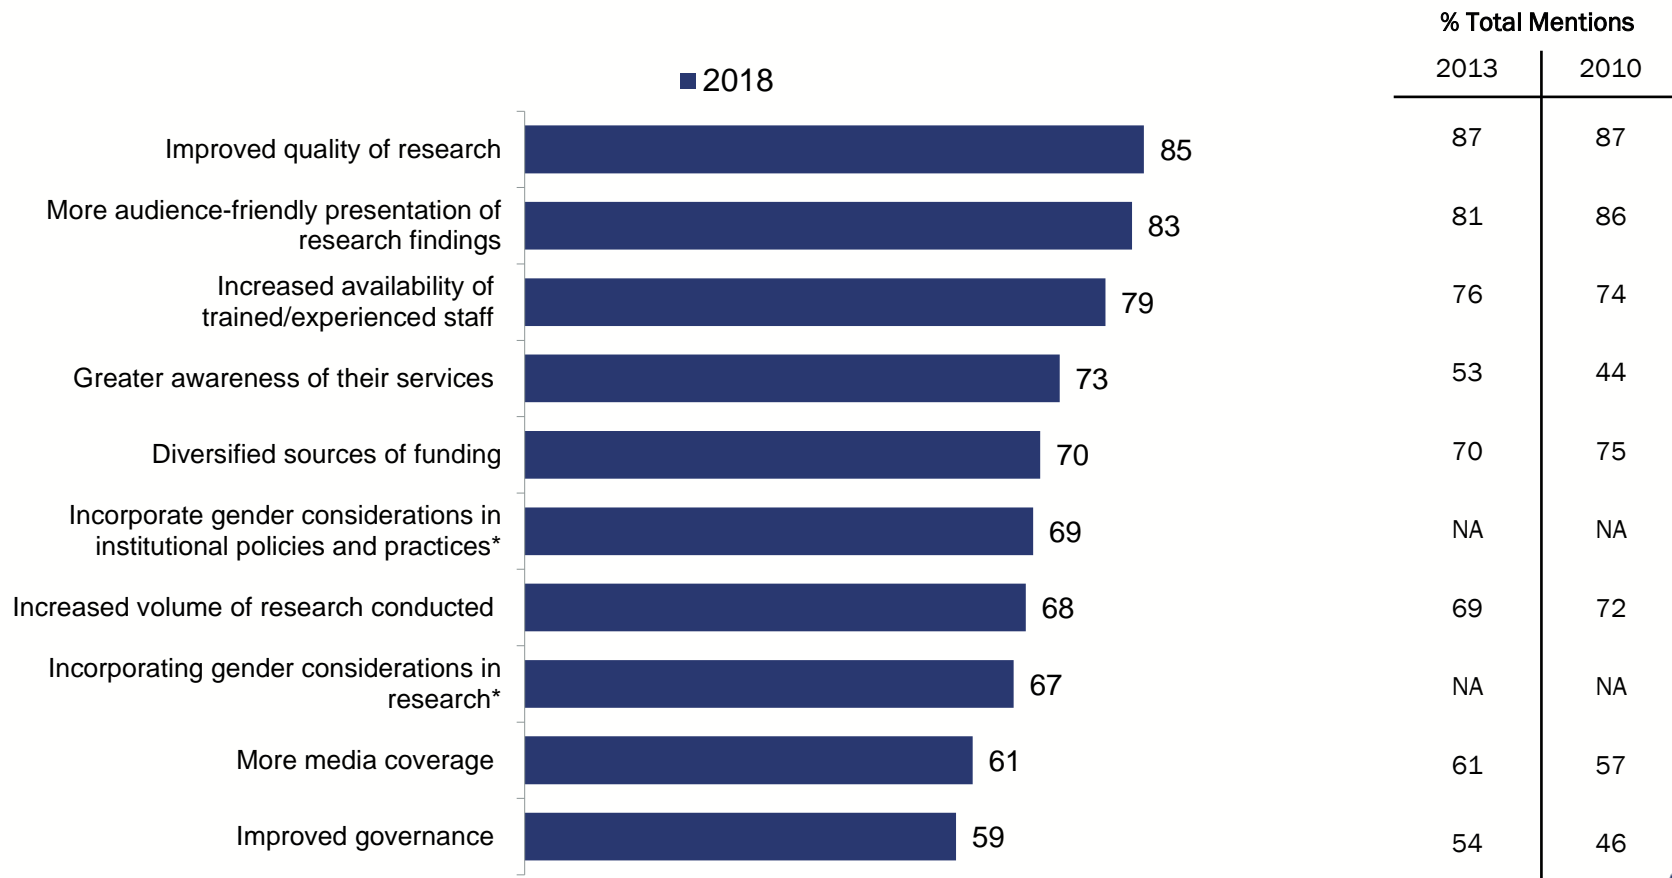

- Across stakeholder groups the findings are generally consistent with averages, with all groups placing high importance on quality of research in improving performance of think tanks.
- Respondents from research/academia are most likely to consider audience-friendly presentation of findings as important to improve think tank performance.
- Government officials tend to place more importance on improved quality of research, increased availability of trained/experienced staff, and greater awareness of services, with all three rated higher than average (>88%).

### Country Level

- Overall, improving the quality of research and having a more audience-friendly presentation of research findings are considered the most important factors in improving think tank performance across nearly all countries.
- Respondents in Honduras and El Salvador are most likely to view increased availability of trained/experienced staff as an important factor for improving performance.

# Advice for independent policy research institutes to better assist stakeholders in their work

Open-end Responses, Latin America, 2018

**Advice for think tanks is relatively consistent, with many people mentioning the same recommendations across the board. Advice for think tanks focused on the following:**

- Increase the transparency and continuity of work while limiting potential bias
- Disseminate research in a manner that is accessible, timely, and easy to understand for all readers
- Develop strategic partnerships and alliances with international research centres, NGOs, government, etc.
- Prioritize issues that are relevant to the country or region and could have a demonstrable impact on local communities and policy
- Diversify sources of funding and limit political partisanship
- General improvement of the quality of research
- Gear studies toward actual application in society and public policy by focusing on relevant, practical issues and realistic conclusions
- Create more direct involvement with the public in research discovery and dissemination by holding public presentations and launches

- “ Systematize good public policy practices in the region. Provide analysis, data and models for the sustainable implementation of public policies that give results at the regional level. Promote critical debates and analysis of public policy plans for current governments  
– NGO, Paraguay ”
- “ Greater relevance of the research topics and depth in the analysis carried out, continuous monitoring of the situation and articulation of the analysis with structural issues  
– Media, El Salvador ”
- “ It would be great if they could provide their reports and information in friendly formats. It is also important to diversify their sources of funding  
– Research/academia, Guatemala ”
- “ Generate critical knowledge, participate in the construction of citizen agendas, promote strategic alliances with international research centers, deepen research based on a human rights approach, prioritize the analysis of the causes of social inequality that perpetuate poverty – NGO, Bolivia ”
- “ Ensure you always guard your independence and be as neutral as possible in researching  
– NGO, Peru ”

GlobeScan is an insights and strategy consultancy, focused on helping our clients build long-term trusting relationships with their stakeholders. Offering a suite of specialist research and advisory services, we partner with business, NGOs and governmental organizations to meet strategic objectives across reputation, sustainability and purpose.

Established in 1987, GlobeScan has offices in Cape Town, Hong Kong, London, Paris, San Francisco, São Paulo and Toronto, and is a signatory to the UN Global Compact and a Certified B Corporation.
